An Investigation of the Relationship between Prince Shōtoku’s \textit{Shōmangyō-gisho} and Two Dunhuang Buddhist Manuscripts: A Debate over Originality and Canonical Value*

MARK DENNIS  
Texas Christian University  
m.dennis@tcu.edu

Abstract: This article examines the relationship between \textit{Nai 93} and \textit{Tama 24}—two manuscript fragments discovered at Dunhuang—and the \textit{Shōmangyō-gisho}, a Buddhist text written in classical Chinese that scholars traditionally attributed to Japan’s Prince Shōtoku (574–622). This discussion focuses on Fujieda Akira’s discovery that these Dunhuang manuscripts predate and closely resemble the text attributed to Shōtoku.

Fujieda’s research caused heated scholarly debate by questioning the \textit{Shōmangyō-gisho}’s authorship and value, leading to the production of a substantial body of research in the late 1960s and 1970s seeking to clarify the relationship between the \textit{Shōmangyō-gisho} and the Dunhuang manuscripts. Specialists in Shōtoku Studies saw these efforts as crucial because assertions of the \textit{Shōmangyō-gisho}’s origi-

* The first part of this article appeared in the Fall 2017 issue of \textit{Manuscript Studies}. I thank the journal’s editors for their gracious permission to use and revise this previously published material. I have made several minor revisions to that article.
nality are central to its perceived value. One can view this research as part of the broader search for the ‘true record’, a goal that informed much of the scholarship on the *Shōmangyō-gisho* and two other Buddhist commentaries attributed to the prince. After discussing Fujieda’s work, the article examines how those who accept Shōtoku’s authorship of the *Shōmangyō-gisho* tried to respond to Fujieda’s key findings, focusing on how they address the Dunhuang discoveries in modern translations and critical editions of the text attributed to the prince. It concludes by offering an alternative angle of critical vision on the relationship between these texts that differs in key ways from this received body of scholarship.

---

**Introduction**

This article investigates the relationship between two manuscript fragments discovered at Dunhuang,¹ referred to as *Nai 93* 奈九三 and *Tama 24* 玉二四, and the *Shōmangyō-gisho* 勝鬘経義疏, a Buddhist text written in classical Chinese traditionally attributed to Japan’s Prince Shōtoku 聖徳太子 (574–622). The determination of Fujieda Akira 藤枝晃 and Koizumi Enjun 古泉円順 that the Dun-

---

¹ Dunhuang is located in northwest China’s Gansu province. In 1900, the Daoist monk Wang Yuanlu 王圓籙 (c. 1849–1931) discovered a large cache of manuscripts in the Mogao Caves 莫高窟. Those manuscripts included a large number of Buddhist texts, many composed in classical Chinese, but also manuscripts written in other languages representing Buddhism and other religious traditions. See http://idp.bl.uk for a link to the International Dunhuang Project (IDP).
huang manuscripts predated and bore a striking resemblance to the text attributed to Shōtoku caused a heated scholarly debate. Indeed, scholars spent much intellectual effort in the late 1960s and 1970s seeking to clarify the texts’ relationship because the Shōmangyō-gisho’s originality is central to its perceived value and canonical status. We can view this scholarship, which continues in the present, as part of the broader search for ‘the true record’ (Japanese, jitsuroku 実録) of Shōtoku studies, which informs much, but not all, scholarship on the Shōmangyō-gisho and two other Buddhist commentaries attributed to the prince.

A little background information may help readers understand Prince Shōtoku’s place in history. He appears in the Nihon shoki 日本書紀 (compiled in 720) and other early texts as an accomplished politician and key patron of the nascent Buddhist community in Japan, which was beginning to develop with the support of continental immigrants. These texts credit him with composing a seventeen-point constitution and promoting diplomatic contacts with the Chinese dynasties and Korean kingdoms from which Buddhist teachers brought their texts and traditions. To promote the local assimilation of Buddhism, the texts say Shōtoku donated land to the community, built temples, and collected texts written in classical Chinese. The texts also describe him as a brilliant and devout practitioner of the new faith who quickly mastered its teachings under the tutelage of Hyeja 慧慈, a Buddhist monk from Goguryeo (one of the Three Kingdoms of Korea). Although differing in details, these texts mostly agree that Shōtoku’s tutelage under Hyeja led to lectures by the prince on key Buddhist texts at court; those lectures served, in turn, as the basis for his composition of the Shōmangyō-gisho and two other Buddhist texts known collectively as the Sangyō-gisho 三経義疏 (Commentaries on the Three Sūtras).

In this earliest period of Japanese Buddhism, adherents recognized the Sangyō-gisho as valuable religious texts; for instance, Chikō 智光 (708?–780?), Saichō 最澄 (767–822), and other figures from this period used the Sangyō-gisho texts to understand and illuminate other Buddhist texts. But it seems that for many adherents it was the very act of their composition by a local Japanese author that was crucial to their perceived value. Some five hundred years after
Shōtoku’s death, Gyōnen 凝然 (1240–1321), a Kamakura-era Buddhist monk of the Kegon school, wrote the first detailed treatises on each of the Sangyō-gisho texts, thereby inaugurating an exegetical tradition that survives into the present day as one key element of Shōtoku studies.

The Search for the ‘True Record’

A key point in the modern period of Shōtoku studies is marked by the 1905 publication of Kume Kunitake’s 久米邦武 Jōgū Taishi Jitsuroku 上宮太子実録 (The True Record of Prince Jōgū). Since its publication, scholars, artists, novelists, and others have produced a massive body of Shōtoku-related materials, including highly technical scholarly studies, manga, television dramas, and online blogs that depict, discuss, and debate key events from Shōtoku’s life, such as his patronage of Buddhism and study of Buddhist teachings with Hyeja.

Many of these studies sought to recover the ‘true record’ of Shōtoku by sifting historical fact from rhetorical embellishment. This goal also sharply defined Sangyō-gisho scholarship, a subdiscipline within Shōtoku studies, wherein most scholars fall into one of two main camps known as the true-composition hypothesis and the false-composition hypothesis. Proponents of the former posi-
tion expended great intellectual effort trying to prove not only that Shōtoku authored the three Sangyō-gisho texts, but that they are also original works of a brilliant Japanese mind, certainly deserving of their valued canonical status. Hanayama Shinshō 花山信勝, Kanaji Isamu 金治勇, and other scholars from this camp tried to defend the texts’ canonical status by revealing their uniqueness, lucidity, and profundity, which requires, in part, detailing their distinctiveness from intellectual models and predecessors. In the case of the Shōmangyō-gisho, for instance, these scholars scrutinized the relationship between Shōtoku’s Shōmangyō-gisho and a text it refers to regularly as the hongi 本義, or ‘model text’, as well as its relationship to a group of texts it refers to as ‘other commentaries’.

Many true-composition hypothesis scholars devoted their energies to responding to the assertions of Tsuda Sōkichi 津田左右吉 (1873–1961) and his false-composition hypothesis successors who reject Shōtoku’s authorship of the three Sangyō-gisho commentaries. Their scholarship represents one part of a broader attack on the received narrative of Shōtoku as a pivotal figure of early Japanese history. Tsuda and other proponents of this position offer evidence they claim proves Shōtoku could not possibly have written the Sangyō-gisho texts, arguing instead that they were likely written by a continental author (or authors) and brought to Japan, or were composed solely or jointly by an immigrant monk (or monks) from the Korean peninsula residing in Japan, after which they were falsely attributed to Shōtoku. Since the publication of Tsuda’s scholarship in the 1930s and 1940s, Fujieda Akira, Koizumi Enjun, and other false-composition hypothesis scholars have elaborated upon and refined his assertions.

The Discovery of the Dunhuang Manuscripts

While rejecting Shōtoku’s authorship of the Sangyō-gisho texts, Fujieda and Koizumi also challenged the Shōmangyō-gisho’s originality by revealing its high degree of correspondence with Nai 93 and Tama 24—the two Dunhuang manuscripts mentioned above, which, scholars agree, pre-date Shōtoku’s text. Yang Yufei 楊玉飛 notes that
Nai 93 is thirty-six pages in length but is missing material that would have appeared at the beginning of the manuscript, while Tama 24 is thirteen pages and corresponds to material from the last section of Nai 93. He describes both manuscripts as being skillfully brushed in gyōsho 行書, a semi-cursive script.  

Scholars consider the revelation of this high degree of correspondence between the Shōmangyō-gisho and these Dunhuang manuscripts to be one of the most important modern discoveries in Sangyō-gisho studies. Its significance is attested to by the flurry of subsequent scholarly activity seeking to determine the precise relationship between these manuscripts and the Shōmangyō-gisho.

In their initial findings, Fujieda and Koizumi identified the Dunhuang manuscripts as the hongi of the Shōmangyō-gisho, and thus referred to them as the ‘Shōmangyō-gisho hongi’ 勝鬘義疏本義 (the model text of the Shōmangyō-gisho). But further study revealed

---

7 Its importance is evident in other ways: for example, Kanaji Isamu notes that these findings were reported in the August 28, 1968 edition of the Yomiuri Shimbun, one of the main Japanese daily newspapers. And the preface to one of the critical editions of the Shōmangyō-gisho notes that its production was motivated, in part, because none of the previous editions had been produced after the publication of Fujieda’s and Koizumi’s research. See Kanaji, Shōmangyō-gisho no shisōteki kenkyū, 23.

8 Koizumi’s reconstruction of Nai 93 can be found in ‘Tonkōhon Shōmangyō-gisho hongi’, 59–141. Fujieda notes that although Shōman-gisho 勝鬘義疏 would have been a more appropriate title, since other commentaries were already known by that name, the former was selected (Fujieda, ‘Shōmangyō-gisho’,
the existence of material in the *Shōmangyō-gisho* that differed from *Nai 93–Tama 24*, and thus seemed to point to a different hongi pre-dating the Dunhuang manuscripts. These differences led them to conclude that *Nai 93–Tama 24* and the *Shōmangyō-gisho* were composed based on the same hongi, which Koizumi labels the ‘hongi genpon’ 本義原本 (source text of the model text).9

Based on his reconstruction of *Nai 93*, the more complete of the two manuscripts, Koizumi estimates that of the *Shōmangyō-gisho*’s roughly 1,400 lines, only about three hundred differ from these manuscripts, and thus over three-quarters of the *Shōmangyō-gisho* came directly from the hongi.10 He and Fujieda thus argue that because the *Shōmangyō-gisho* relies so heavily on this earlier text, it exhibits very little originality regardless of the latter’s identity and their precise relationship. This high degree of correspondence between the Dunhuang manuscripts and the *Shōmangyō-gisho* leads Fujieda to conclude that scholars should understand the latter as no more than a ‘revised text’.11 These sorts of texts, he notes, are not uncommon in 487). Based on the brush work, Koizumi concludes that both manuscripts are sixth-century texts from the Northern Dynasties period, but concedes that while it is possible they were transmitted from the south, they were, at a minimum, copied and read in the north. Although there are differences between *Nai 93* and *Tama 24*, Koizumi notes that the meaning of the text is not significantly altered by them and that they are clearly copies of the same text. Most of these differences are related to specific characters: variants that have the same sound or the omission of characters in one or the other manuscript. Koizumi, ‘Tonkōhon’, 69.

11 Fujieda, ‘Shōmangyō-gisho’, 504. In a similar way, Watanabe Shōkō describes the three commentaries as ‘notebooks’, which could have been written by a student studying with a Chinese master. See Watanabe, ‘Sangyō-gisho no sakusha mondai’, 154. In assessing the originality of the *Sangyō-gisho*, Hirai Shun’ei writes: ‘Because the *Sangyō-gisho* relies on the hongi for over two-thirds of its interpretations, and also draws on the [thought of scholars cited in the] work of Jizang, [these commentaries] should be considered patchworks. And because there are so few quotations of the sūtras and other commentaries, they
the East Asian commentarial tradition and function mainly ‘to supplement, correct, and abbreviate their root texts’. Fujieda further questions the originality of the *Shōmangyō-gisho* by noting that over half its differences with *Nai* 93–*Tama* 24 occur in short summaries of the succeeding section that appear at the beginning of section breaks in the *Shōmangyō-gisho*, but which do not appear in the Dunhuang manuscripts.

The True-Composition Hypothesis Response to the Dunhuang Manuscripts

While Hanayama, Kanaji, and other true-composition hypothesis scholars acknowledge these relationships and the *Shōmangyō-gisho*’s reliance on its intellectual predecessors, they sought with great effort to prove that it is not, as Fujieda and Koizumi argue, simply a rehashing of the Dunhuang manuscripts and the hongi, but rather a valuable religious work in its own right. These scholars see the *Shōmangyō-gisho*’s reclassification as an unoriginal copy as a crucial blow to the large corpus of scholarship extolling Shōtoku’s great intellect and position as first patriarch of the nascent Japanese Buddhist tradition. Moreover, this proof is, naturally, crucial to maintaining the text’s value because even if scholars proved Shōtoku are basic texts that are rather unsophisticated. In this way, as is pointed out by Ōno [Tatsunosuke], it would not be unusual if they were produced in the Asuka period. But in that case, just as is asserted by the false-composition-hypothesis, it is with the assumption that they were not the work of *Shōtoku Taishi* alone’. Hirai, ‘*Sangyō-gisho* no seiritsu’, 533.

Fujieda, ‘*Shōmangyō-gisho*’, 504.

Fujieda, ‘*Shōmangyō-gisho*’, 501–4. For example, the text uses the combination *raii* 来意 six times to summarize a chapter or a longer passage. For instance, *T* no. 2185, 56: 0016b08–9 reads: ‘The central subject of this chapter is that sentient beings, having heard [the teachings] on the tathāgatagarbha described in Chapter 2, are encouraged to have faith in the Eight Noble Truths’ 此章來意者。物聞上第二如來藏章勸信八聖諦。
composed it, if it is little more than a restatement of the hongi and other commentaries, its value would diminish significantly. To this end, they stress that although the Shōmangyō-gisho is similar in some ways to Nai 93–Tama 24, and possibly to an even earlier hongi, a number of its passages do not agree with these manuscripts. Indeed, some appear to address the work of Chinese Buddhist exegetes whose work is lacking in the Dunhuang manuscripts, while still others are unique to the Shōmangyō-gisho.

Hanayama argues that while Shōtoku relies on the hongi, he does not ‘follow it blindly’, and that although the prince accepts some of the interpretations of his Chinese predecessors, he criticizes them at other times, and thus exhibits a ‘critical attitude’ toward the work of these exegetes. He writes: ‘Based on my research into the thought, sentences, language, and so forth of the entire Shōmangyō-gisho, and on comparisons to other extant commentaries [on the Śrīmālā-sūtra 胜鬘経], I estimate there to be approximately one hundred eighty passages that reveal the author’s own interpretations’. Thus, for Hanayama, although the text attributed to Shōtoku participates in and transmits the Chinese exegetical tradition, it represents a crucial, locally produced interpretive development. Accordingly, Hanayama justifies it as an object of value and reverence that is worthy of detailed exegesis in the model established in the Kamakura era by Gyōnen.

While Kanaji also acknowledges that the Shōmangyō-gisho relies on this body of previous scholarship, he too argues that it exhibits unique interpretations, writing:

---

14 Hanayama, Jōgūōsen, 405. In this regard, he cites Shōtoku’s use of phrases such as, ‘I believe that these views are insufficient’, among others, as proof of Shōtoku’s ‘critical attitude’. Hanayama, Jōgūōsen, 313.

15 Hanayama, Jōgūōsen, 408.

16 Kanaji discusses what he describes as the Sangyō-gisho’s ‘special characteristics’ in a number of articles and books, including Shōtoku Taishib kyōgaku no kenkyū, 27–52, 194–217. See also Kanaji, Sangyō-gisho no Shomondai, 75–94. See also Watanabe, ‘Shōmangyō-gisho no tokuchō’, 126–32.
When we think in these terms, it is not then so important [to determine] to what extent the interpretations of the hongi [appear] in the Shōmangyō-gisbo and to what degree they are the individual [ideas] of [Shōtoku] Taishi. Since there is no meaning to the gisbo 義疏 apart from the hongi, a more important concern is how the gisbo was composed based on [Shōtoku’s] interpretation of the Śrīmālā-sūtra. If we search too deeply in this way, we will not only lose the vitality of the gisbo, it is also possible that our understanding of the sūtra itself will become muddied. We must seek, therefore, to understand how, based on the hongi, Shōtoku read and interpreted the sūtra, and then to make his way of reading and accepting it our own as we too taste again the sūtra itself. If we do not, we have not truly read the gisbo. And in this way, there are no obstacles to taking the gisbo as a whole as the work of [Shōtoku] Taishi. That is, [while it is true] he used the hongi to understand the sūtra, it is still his own work because it is not simply [the repetition of the hongi’s ideas]; rather, [Shōtoku’s commentary] surpasses the hongi by putting forth such new interpretations.17

In this way, the Shōmangyō-gisbo participates in the East Asian commentarial tradition but exhibits a ‘progressive, interpretive step forward’.18 Even though Kanaji argues it is not so important to separate the interpretations of the hongi from those of the Shōmangyō-gisbo, the great intellectual effort that he, Hanayama, and others made to prove the latter’s uniqueness seems to belie this claim. Kanaji also observes that determining the text’s authorship is a complex project, and he writes: ‘Even if we knew that a single individual wrote the Sangyō-gisbo, proving conclusively that it was Shōtoku Taishi is difficult. Thus, even Hanayama’s work must be understood as a hypothesis’.19

These comments raise the following questions that I plan to pursue as part of a broader project on the intellectual history and

17 Kanaji, Shōmangyō-gisbo no shisōteki kenkyū, 24.
18 Kanaji, Shōmangyō-gisbo no shisōteki kenkyū, 23.
19 Kanaji, Sangyō-gisbo no Shomondai, 64.
exegetical tradition of Sangyō-gisho studies. Given this complexity and these seemingly inconclusive results, why have these and other scholars persisted in searching for the true record? What are the key assumptions regarding textuality, authorship, and canon formation that undergird that search? Furthermore, in focusing so intently on proving or disproving Shōtoku’s authorship of the text and its inherent originality in pursuit of the ‘true record’, what intellectual roads have they foreclosed?

The rest of this article sketches out some preliminary answers to the second and third questions by first taking up the text’s authorship through a broad lens. Having done so, we will then examine how this issue was addressed in six modern editions of the Shōmangyō-gisho in light of Fujieda’s discovery. Here, we will consider these editions’ responses to the Dunhuang evidence by focusing on how each one presents and interprets the text’s initial declaration of authorship, which Fujieda and other scholars agree is an interpolation. Our investigation of these passages in the six editions will provide the material for the article’s final section outlining an alternative way to understand the Shōmangyō-gisho that is unbound by the binaries—true-false, Japanese-Chinese, and so on—that undergird received scholarship. The term unbound gestures toward an ‘unbinding’ of the text from its ‘original’ form that is narrowly tied to a particular time, place, and person; this process will, in turn, ‘unbind’, or open up, other angles of critical vision on the Shōmangyō-gisho that will be articulated in the final section.

**Buddhist Scriptural Self-sufficiency**

To better understand the significance of the Dunhuang discovery, we can place that declaration of Shōtoku’s authorship in the context of efforts to create an authoritative local Buddhist tradition based on models brought to the archipelago in the prince’s era by immigrant groups from the Chinese dynasties and the Korean kingdoms. Through a broad lens, we can identify helpful similarities among these attempts to assimilate Buddhism on the archipelago and attempts to do so in China, Korea, Tibet, and elsewhere, wherein local pro-
ponents of Buddhism sought to create, using diverse means, what Robert Buswell describes as scriptural and ‘cultural self-sufficiency’. For instance, he and other scholars have shown how the composition of falsely attributed Buddhist texts in China fit this pattern. Buswell argues in this regard that ‘the composition of Chinese Buddhist apocrypha is but one example of a complex process of cultural hermeneutics whereby foreign Indian concepts were transformed into familiar Chinese ideas’.

In the case of Silla, one of the Korean kingdoms, he argues that the ‘discovery’ of the *Vajrasamādhi-sūtra* 金剛三昧経 beneath the sea off the Korean peninsula by a kingdom envoy was meant to prove Silla Buddhism’s cultural and scriptural self-sufficiency relative to Chinese Buddhist models, as part of efforts to create legitimate local Korean Buddhist traditions. That is, since the text was of local provenance, these indigenous Buddhist traditions no longer needed a constant influx of texts and interpreters from China. The process Buswell describes includes a complex negotiation between the legitimacy that Buddhists have sought in earlier or, preferably, the earliest forms of Buddhism, that often came from the west and across the sea or mountains, and what Charles Hallisey describes as the production of meaning in ‘local circumstances rather than in the origins of the tradition’.

In the case of Japan, Buddhists in Shōtoku’s era and beyond often understood the legitimacy of Buddhist texts, teachings, and schools in relation to traditions that lay across the sea to the west. For instance, in the Kamakura era (1185–1333), a period of heightened interest in Shōtoku, major Buddhist thinkers like Gyōnen understood this relationship through the lens of the *sangoku* 三国, or ‘three lands’, paradigm, through which they saw Chinese Bud-

---

23 Hallisey, ‘Roads Taken’, 50.
dhist traditions as the proximate source of authoritative Buddhism, while Indian models provided legitimacy at further remove. Indeed, we can detect the earliest stage of this process of negotiation on the archipelago in the declaration itself, which asserts the prince’s local authorship of the *Shōmangyō-gisho* but does so in what David Lurie describes as the ‘transregional’ Chinese language—we revisit Lurie’s ideas on the development of writing and reading practices on the Japanese archipelago in the conclusion. Its ongoing negotiation plays out in relation to the text in several fascinating ways, including the production of a large body of scholarship written in Japan, but also through the transmission of Shōtoku’s texts back across the sea as proof of Shōtoku’s erudition and the assertion of Japanese Buddhism’s cultural and scriptural self-sufficiency. As this process played out over the centuries, the *Shōmangyō-gisho* naturally diverged further from the Dunhuang manuscripts.

**Modern *Shōmangyō-gisho* Scholarship**

Since the *Shōmangyō-gisho* served as just such a symbol of cultural and scriptural self-sufficiency, Fujieda and Koizumi’s Dunhuang evidence struck at the very heart of the text’s perceived value, which has, as noted above, depended not only on the veracity of the declaration of authorship itself but also on scholarly appraisals of its originality, its profundity, and even its inherent ‘Japaneseness’. For instance, Nakamura Hajime 中村元 describes Shōtoku as ‘one of the best and most benevolent of all the rulers of Japan and the real founder of Buddhism in Japan’, claiming Shōtoku’s spirit served as the foundation for the later development of ‘Japanese thought’.²⁴ He contends, moreover, that the composition of the *Sangyō-gisho* was crucial to establishing Japanese Buddhism and that the prince’s choice of the three texts was ‘entirely based on the Japanese way of thinking’.²⁵ He argues that Shōtoku’s text compares favorably to Jizang’s 吉蔵 (549–623)

---

commentary on the Śrīmālā-sūtra, asserting that while the work of the Chinese exegete is exhaustive, it represents a lifeless formalism and scholasticism, concurring with the assessment of the Japanese Buddhist monk Fujaku 普寂 (1707–1781). On the other hand, Shōtoku’s text is concise and reveals the root sūtra’s central meaning.

In a particularly vitriolic defense of the Sangyō-gisho from Tsuda’s scholarship of the 1930s and 1940s, Umehara Takeshi 梅原猛, a well-known proponent of Nihonjin ron 日本人論 (the theory of Japaneseness), attacked Tsuda for not reading the commentaries in any depth and relying mainly on ‘external’ evidence. Tsuda, writes Umehara, consequently ‘brings Shōtoku down to his own level as he rejects the achievements of the prince because he cannot comprehend them based on his own limited capacity’.26 Umehara inveighs against Tsuda’s methods, writing:

Having barely even read someone’s work, to then reject that person’s authorship of it is extremely rude. This is the very height of rudeness toward an author. But Tsuda lacks any sense of this. That is, having read very little of the Sangyō-gisho, he inverts the very tradition that has respected them as the work of [Shōtoku] Taishi. But tradition is correct. Rather than rejecting Shōtoku’s authorship of the text without reading it thoroughly, would it not be more scientific and ethical to admit that even though one had not read it, one does not believe [these accounts]. Lacking any understanding of this, Tsuda has done something that is very unethical and very unscientific.27

Although these statements of Umehara represent the more vitriolic end of the scholarly spectrum, the debates over Shōtoku’s authorship of the Sangyō-gisho and their place in the canon have been atypically emotional in the generally staid world of Japanese Buddhist Studies. Indeed, similar, but more muted, sentiments about the important role Shōtoku played in establishing Buddhism on the archipelago inform much, but not all, of post-war Shōmangyō-gisho

26 Umehara, Shōtoku Taishi, 389.
27 Umehara, Shōtoku Taishi, 393.
scholarship, including the post-Dunhuang versions of the text examined below, produced by scholars, temples, and Shōtoku-related associations who affirmed the declaration of authorship. Before doing so, however, we look briefly at key early editions of the *Shōmangyō-gisho* and at the interpolated declaration of authorship to provide helpful context to those modern *Shōmangyō-gisho* editions.

**Premodern *Shōmangyō-gisho* Editions**

Hōryūji 法隆寺, one of the temples closely associated with Prince Shōtoku, is the site of the first printing of the *Sangyō-gisho*. This printing, executed in 1247, served as the model for all future prints, and is, in the case of the *Shōmangyō-gisho* printing, the oldest extant version of the commentary. The colophon of the *Hokke-gisho* notes that the printing was produced in the first year of the Hōji era 宝治 (1247), and is thus referred to as the ‘Hōji printing’, and that ‘the original text of Prince Jōgū, which is extant in Hōryūji, was used as the model for this engraving’. Since the prints of the *Shōmangyō-gisho* and the *Yuimagyō-gisho*維摩経義疏 lack colophons, however, their dates are uncertain. Some scholars believe that because the commentaries were printed as a set, a postscript was added only to the *Hokke-gisho*, which they believe, following the traditional ordering of Shōtoku’s composition of the commentaries, was the last of the three printed. Hanayama Shinshō thus concludes that the *Shōmangyō-gisho* and the *Yuimagyō-gisho* were likely printed before this date. He also notes that the wood blocks used in the Hōji printing added markings to the text to aid in reading. Hanayama observes that this

---

28 Quoted in Hanayama, *Jōgūōsen*, 35.

29 Since the Hōji print of the *Shōmangyō-gisho* lacks a colophon, however, it is unclear what manuscript was used as a model. Based on a comparison of the style of the characters found in the Kamakura prints of the *Shōmangyō-gisho* and the *Hokke-gisho*, Hanayama concludes that even if the Kamakura print of the *Shōmangyō-gisho* was not based on the original, it was, at a minimum, based on a very early manuscript. See Hanayama, *Jōgūōsen*, 127.
first printing did not, however, interpolate passages from other texts, such as the Śrīmālā-sūtra or Mingkong’s 明空 (dates unknown) Shengmanjing shuyi sichao 勝鬘経疏義私鈔, as was done in later printed ehon editions.

Just as significant in this regard, Fujieda Akira points out that marginalia from the extant manuscript of the Hokke-gisho, claimed to be in Shōtoku’s hand, were omitted when the wood blocks for the Hōji printing were engraved, and that the ‘original text’ was thereby altered in this and other significant ways. He observes that although this manuscript exhibits two distinct styles of writing separated by over one-hundred years, this distinction was lost once the text was cut onto woodblocks. He also points out that these marginalia—which include red markings as well as paper pasted onto the text—were also lost in this printing.

Based on this high degree of fidelity between the extant original of the Hokke-gisho and the Kamakura print, Kanaji Isamu, Hanayama, and Fujieda believe the Kamakura prints of the Shōmangyō-gisho and the Yuimagyō-gisho likely exhibit a similar degree of fidelity to the manuscripts that were available at the time. Since the original manuscripts of the Shōmangyō-gisho and the Yuimagyō-gisho are no longer extant, however, no one can confirm this point.

---

31 Hanayama discusses other similarities between the Kamakura prints of the Shōmangyō-gisho and Hokke-gisho, noting, for example, that their characters are the same style, they have nineteen characters per line and seven lines per page, and both lack kaeriten, okurigana, or other types of markings that were added to later prints. He believes, moreover, that the high degree of fidelity between the Kamakura print of the Hokke-gisho and the extant ‘original’ suggests that it was engraved by a skilled artist who was knowledgeable about the text and was possibly a follower of Shōtoku. He adds that although there is no conclusive proof that the same individual engraved the blocks for the Shōmangyō-gisho print, the style of the characters suggests this to be a reasonable assumption. See Hanayama, Jōgūōsen, 97 and 128.

32 Kanaji was able, however, to offer a degree of support to this hypothesis by comparing the Yuimagyō-gisho print with two extant, but incomplete, man-
Although it is unclear how many printings and copies were made, Hanayama notes that extant copies of the Kamakura printing of the *Shōmangyō-gisho* prove that the blocks were corrected and reprinted at least once.\(^{33}\)

Fujieda also argues that a series of such alterations in the presentation of the *Shōmangyō-gisho* on the printed page transformed the reader’s contact with the text. He cites, among other examples, the Kan’ei 寛永 edition of 1637, which added kaeriten 返り点 and furigana 振り仮名. Although meant to make the text more accessible to the reader, these and other changes, he argues, actually took it further from its original form.\(^{34}\) Fujieda reminds us that although the Kan’ei print added kaeriten and furigana, ‘In the time of Shōtoku

---

uscripts: one housed in the collection of Hōryūji, dating to the Eiman era 永万 (1165–1166), and another at Ōtani University, dating to the Kangen era 寛元 (1243–1247). Based on these comparisons, Kanaji discovered that the Kamakura print of the *Yuimagyō-gisho*—just as was evident in a comparison of the *Hokke-gisho* original manuscript and Kamakura print—mixes the characters 身子 (forty-one times) and 真子 (seventeen times) to translate the name Śariputra. Since the appearance of these character combinations in the printed edition of the *Yuimagyō-gisho* matches their locations in the two manuscripts, Kanaji is able to offer limited proof for the claim that the three prints were all faithful to their models. See Kanaji, *Sangyō-gisho no Shomondai*, 59.

\(^{33}\) By comparing the copies held in the collections of Ishii Kōyū and Hōryūji, Hanayama produces evidence for multiple printings by noting examples of these corrections that appear in one but not both prints; these corrections include the interpolation or elimination of characters that do not appear in Guṇabhadra’s 求那跋陀羅 Chinese translation of the *Śrīmālā-sūtra*. The Ishii print, for example, includes a passage reading 無異所攝受正法者 (‘is not different from the acceptance of the True Dharma’) for which the corresponding passage in the Hōryūji print omits the character 所, and thus reads 無異「」攝受正法者. By creating a space between the characters 異 and 摄, and by deleting the character 所, the passage is altered so that it agrees with Guṇabhadra’s translation. The passage, appearing at *T* no. 353, 12: 218b28, reads: 無異正法. 無異攝受正法. 正法即是攝受正法. See Hanayama, *Jōgūōsen*, 128.

\(^{34}\) Fujieda, ‘*Shōmangyō-gisho*’, 493.
and Empress Suiko, such markings were unavailable’, and ‘although the early reader would have memorized the *sūtra* and its reproduction was thus unnecessary, this is not the case with the modern reader’. Fujieda cites, for example, the interpolation of a text map in the Meiji period’s 明治時代 Shimada Bankon 島田蕃根 printed edition (1895) of the text. He adds that in some cases these changes inadvertently shifted the reader’s focus back to the root text because the Chinese translation of the *Śrīmālā-sūtra*, divided to match the corresponding sections of the *Shōmangyō-gishō*, appear in the *ehon* as bold characters.

One of the key changes in the modern era that Fujieda highlights is the declaration of authorship, which in some editions became indistinguishable as an interpolation. That declaration, which also appears in the *Hokke-gishō* 法華義疏 (one of the two other Sangyō-gishō commentaries), reads: ‘This is from the private collection of King Jōgū of the Land of Yamato, it is not a text from across the sea’ 此是大倭國上宮王私集非海彼本. As Fujieda observes, the interpolated declaration represents one of many important additions to the *Shōmangyō-gishō*, which has been altered in the modern era as it was reproduced in printed editions at temples associated with Shōtoku, as *ehon* 絵本 (also written as 會本) that combine the *Shōmangyō-gishō* with the *Śrīmālā-sūtra* and other related texts, and, finally, as modern translations, appearing in both print and digital formats. These additions, which Gérard Genette calls ‘paratexts’, include title pages and introductions, footnotes and endnotes, tables of contents and indexes, diacritic markings and text maps, and many other sorts of materials. In his description of the paratext, Genette observes that a text is rarely presented to the world in a ‘raw’ or ‘unadorned’ state since these and other sorts of ‘verbal productions’ generally accompany it.

---

35 Fujieda, ‘*Shōmangyō-gishō*’, 493.

36 Hanayama Shinshō notes that the interpolations into the two texts differ slightly: while the *Shōmangyō-gishō* uses 委 and 国 for ‘Yamato’ and ‘country’, the *Hokke-gishō* uses 倭 and 國. See Hanayama, ‘Gyobutsu Hokkeso’, 397–422.

Modern Versions of the *Shōmangyō-gisho*

The modern editions of the text produced before the discovery of the Dunhuang manuscripts include the *Dai Nihon bukkyō zensho* 大日本佛教全書 (1912) and the *Nihon Daizōkyō* 日本大藏経 (1917), which combines the *Shōmangyō-gisho* with Fujaku’s *Shōman shishikukyō shūshō* 勝鬘獅子吼經宗鈔 in the form of an *ebon*. In 1929, the three *Sangyō-gisho* commentaries were included in Volume 56 of the *Taishō Shinshū Daizōkyō* 大正新脩大藏経, the most recent printing of the Chinese Buddhist canon and Japanese commentaries, digitized in 2005 as part of the SAT Daizōkyō Database project (SAT 大正新脩大蔵経テキストデータベース), making the *Shōmangyō-gisho* freely available online.\(^{38}\)

As reference for the following section and the conclusion, I reproduce below the first few lines of the *Taishō* edition of the *Shōmangyō-gisho* with my own translation.\(^{39}\) The ▶ icon serves as a hyperlink that brings up a copy of the printed text in the left-hand column of the screen, while ① and ② are footnotes: the first lists the Hōji and other earlier printed editions of the *Shōmangyō-gisho* and the second indicates the different ways that those versions present the declaration of authorship.

\(^{38}\) The database is available at: http://21dzk.l.u-tokyo.ac.jp/SAT/index_en.html. See also, Takakusu and Watanabe, eds., *Taishō shinshū Daizōkyō*.

In this section, we examine the presentation and interpretation of the declaration of authorship in six modern editions of the *Shōmangyō-gisho* presented in chronological order. We will compare those editions, each produced after the discovery of the Dunhuang manuscripts, to the Taishō edition’s presentation of the *Shōmangyō-gisho* and consider how each deals with the Dunhuang evidence. For each edition, I list the information appearing on the title page and the presentation of both the declaration of authorship and the first sentence of the *Shōmangyō-gisho* (*T* no. 2185, 56: 0001a06). I also offer a one-paragraph summary of the edition, focusing on its treatment of the Dunhuang evidence. Although those summaries offer just a cursory treatment of this crucial issue, they provide useful material for constructing an alternative understanding in the conclusion of the fascinating process by which the Dunhuang manuscripts and the *Shōmangyō-gisho* diverged.

Example I. Shitennōji *ebon* 四天王寺會本 (1971)\(^{41}\)

i. Title page:

聖徳太子御撰 – [honorific] Composed by Prince Shōtoku

四天王寺 – Shitennōji

會本 – *ebon*

勝鬘経義疏 – *Shōmangyō-gisho*

---

\(^{40}\) I made several minor modifications to how this material is presented. For instance, I changed all vertical text to horizontal text to conserve space and modified some of the markings. I also added ‘[honorific]’ to indicate the use of the character 御.

\(^{41}\) *Shitennōji ebon*, 1971.
ii. Declaration of authorship:

‘This is from the private collection of King Jōgū of the Great Land of Yamato. It is not a text from across the sea’. The declaration matches the Taishō text although the editors inserted *katakana* to indicate Japanese syntax.

iii. Footnote from Declaration of authorship:

This footnote offers the same information as the Taishō edition about how the declaration of authorship appears in different printed editions. ๔ refers to the An'ei 安永 printed edition executed in 1779, which renders the declaration as: ‘Written upon imperial decree by [King] Jōgū of the Land of Yamato’ 大倭國上宮奉詔撰. ๔ ๔ points to the 1895 Meiji edition, referred to above as the Shimada Bankon edition, and renders the declaration: ‘[honorific] Written by Prince Jōgū’ 上宮皇太子御製.

iv. First sentence:

‘As for [Queen] Śrīmālā, she was originally inconceivable’. The first sentence matches the Taishō text although the editors inserted *katakana* to indicate Japanese readings.

---

42 *Shitennōji ebon*, 1.
43 *Shitennōji ebon*, 1.
v. Summary:

The editors state that they published the Shitennōji *ebon* to commemorate the 1,350-year anniversary of Prince Shōtoku’s death, for which the temple had planned several activities. This edition includes a table of contents, introductory material, an afterword, index, and a text map divided into three fold-out sections. The afterword describes Shōtoku as the ‘Preceptor of Yamato’ 

and 国の教主, an epithet found in the hymns of Shinran 親鸞 (1173–1263), the founder of Jōdo Shinshū 浄土真宗. In explaining their decision to produce the *ebon*, the editors mention the value of Shōtoku’s teaching of ‘harmony’ in the turbulence of the present age that threatens humanity itself. Their decision was also due, in part, to Shōmangyō-gisho research entering a new phase because of the discovery of the Dunhuang manuscripts, although they do not examine the significance of the discovery. They do offer thanks to Fujieda Akira for his assistance with the Dunhuang texts, which they consulted in preparing their edition.

Example II. *Nihon Shisō Taikei* 日本思想大系 (1975)

i. Title page:

勝鬘経義疏 – Shōmangyō-gisho
早島鏡正 – Hayashima Kyōshō
築島裕 – Tsukishima Hiroshi
校注 – editors

ii. Declaration of authorship-right hand page:

此是大倭国上宮王私集非海彼本

---

44 *Shitennōji ebon*, 172.
45 Hayashima and Tsukishima, *Shōmangyō-gisho*. 
‘This is from the private collection of King Jōgū of the Great Land of Yamato. It is not a text from across the sea’. This matches the _kanbun_ of the Taishō text.

iii. Declaration of authorship-left hand page:

此(は)是(れ)大倭国上宮王ノ私ノ集(に し て)海彼の本(に)非(ず)

‘This is from the private collection of King Jōgū of the Great Land of Yamato. It is not a text from across the sea’. This rendering offers an interesting combination of _hiragana_ inside parentheses to indicate Japanese readings but also _katakana_ to indicate the possessive.

iv. First sentence-right hand page:

夫勝鬘者本是不可思議。

‘As for [Queen] Śrīmālā, she was originally inconceivable’. This version matches the Taishō text.

v. First sentence-left hand page:

夫レ勝鬘(は)[者]本は是れ不可思議なり。

‘As for [Queen] Śrīmālā, she was originally inconceivable’. _Kundoku_ 訓読 version.

vi. Summary:

This edition reproduces the classical Chinese on the right-hand page and the corresponding _kundoku_ version on the left-hand page. The asterisk appearing above the character 此 in the declaration of authorship in the _kundoku_ version points to a note in the upper column of the page that reads: ‘It is believed that these two lines of the declaration were added by someone else. See the endnotes’. That endnote states the
declaration of authorship was added to both the *Shōmangyō-gisho* and the *Hokke-gisho* some time after 753, possibly to assert the legitimacy of the Japanese Buddhist tradition and mentions the arrival of the Chinese Buddhist monk Jianzhen 鑑真 (688–763) on the archipelago in 754. The translators then refer readers to the work of Fujieda Akira and Hanayama Shinshō that I described above. Additional endnotes take up the Dunhuang manuscripts, noting how, for instance, the *Shōmangyō-gisho* differs from those manuscripts in its division of the *sūtra*, and offers an extensive comparison of the differences found among the *Śrīmālā-sūtra*, the *Shōmangyō-gisho*, the Dunhuang manuscripts, and other commentaries addressing the root text.

Example III. Hanayama Shinshō 花山信勝 (1977) 

i. Title page:

花山信勝校訳 – Hanayama Shinshō revised translation
勝鬘経義疏 – *Shōmangyō-gisho*
付解説宝治板勝鬘経義疏 (影印) – includes commentary and a facsimile of the Hōji edition of the *Shōmangyō-gisho*
吉川弘文館刊行 – Publication of Yoshikawa Kōbunkan

ii. Declaration of authorship:

これ こ やまとのくに かむつみやのみこ わたくしにあつむるところ
此は是れ 大倭国 上 宮 王の 私 集、

海 彼 の本には非ず (撰号は後人加筆)

‘This is from the private collection of King Jōgū of the Great Land of Yamato. It is not a text from across the sea’. *Kundoku* version.

---

47 Hanayama, *Shōmangyō-gisho kōyaku*. 
iii. First sentence:

[総序] 夫れ勝鬘（夫人）は、本（本体）は不可思議なり。

‘As for [Queen] Śrīmālā, she was originally inconceivable’. Kundoku version.

iv. Summary:

This edition includes a table of contents, the text rendered in kundoku, commentary, a complete copy of the Hōji print, and an index. Among the nine notes Hanayama includes in the introduction, the last reads: ‘For the purpose of having as many people as possible read [this revised translation], I have attached many rubi ルビ markings, which do not necessarily represent the readings from ancient times’. Hanayama mentions that he had started working on his earlier translation of the Shōmangyō-gisho, which he describes as ‘our country’s first literary work’, the day after World War II ended as the country turned from military might to humanistic endeavors. He produced this revised edition some thirty years later because of important changes in the modern Japanese language but also because of the discovery of the Dunhuang manuscripts, which he describes as quite valuable. In the commentary, while Hanayama admits the close connection between the Shōmangyō-gisho and the Dunhuang texts, he argues that Shōtoku’s text differs in key ways, offering important critiques and unique interpretations of the Śrīmālā-sūtra.

---

48 Hanayama, Shōmangyō-gisho kōyaku, 7.
49 Hanayama, Shōmangyō-gisho kōyaku, 1.
50 Hanayama, Shōmangyō-gisho kōyaku, 273.
Example IV. Inazu Kizō 稲津紀三 (1983)\textsuperscript{51}

i. Title page:

上宮・聖徳太子撰 – Composed by Jōgū-Prince Shōtoku
改訂新版：勝鬘経義疏 (漢訳文 勝鬘経対照) – Newly revised edition-\textit{Shōmangyō-gisho} (Translation of Chinese text with comparison to \textit{Śrīmāla-sūtra})
稲津紀三 釈注 – Translator Inazu Kizō

ii. Declaration of authorship:

此は是れ、大倭国上宮王の私集にして、海の彼の本に非ず

‘This is from the private collection of King Jōgū of the Great Land of Yamato. It is not a text from across the sea’. \textit{Kundoku} version. This edition offers no notes explaining the declaration.

iii. First sentence:

夫れ勝鬘は、本はこれ不可思議なり。

‘As for [Queen] Śrīmālā, she was originally inconceivable’. \textit{Kundoku} version.

iv. Summary:

In his introduction, Inazu invokes Shinran’s description of Shōtoku as the ‘Preceptor of Yamato’ and includes copies of Shinran’s hymns to Shōtoku as an appendix. He writes: ‘The most important goal of this publication is to enable people to

\textsuperscript{51} Inazu Kizō, \textit{Shōmangyō-gisho kaitei shinpan}. 
become directly familiar with Shōtoku Taishi’s *Shōmangyō-gisho*.\(^{52}\) He also describes the discovery of the two Dunhuang manuscripts by Fujieda Akira as a valuable contribution to Shōtoku studies. Although he acknowledges that a comparison of Shōtoku’s *Shōmangyō-gisho* to these manuscripts reveals many similarities, he, like Hanayama, highlights the differences, including Shōtoku’s reinterpretation of the ten stages of the bodhisattva. He concludes that the discovery of the Dunhuang manuscripts ‘does not diminish the original value of the prince’s text since it was given expression through the remarkable individuality of Prince Shōtoku himself. Therefore, regardless of whatever other materials may be discovered, my interpretation of the [*Shōmangyō-gisho*] will not change’.\(^{53}\)

**Example V. Shōtoku Taishi Research Association 聖徳太子研究會 (1988)\(^4\)**

i. **Title page:**

国民文化研究會聖徳太子研究會著 – Produced by the National Culture Research Association-Prince Shōtoku Research Association
聖徳太子佛典講説 – Explication of Prince Shōtoku’s Buddhist Texts
勝鬘経義疏の現代語訳と研究 (上巻) – Modern Translation and Research of the *Shōmangyō-gisho* (first volume)
大明堂發行 – Publication of Taimeidō

ii. **Declaration of authorship:**

‘This is from the private collection of King Jōgū of the Great

---

\(^{52}\) Inazu, *Shōmangyō-gisho kaitei shinpan*, 8.

\(^{54}\) Shōtoku Taishi Kenkyūkai, *Shōmangyō-gisho no gendaigoyaku*. 
Land of Yamato. It is not a text from across the sea’. This translation omits the declaration of authorship.

iii. First sentence:

[総序 その一『勝鬘経』の大意とその題名の御解釋] (現代語譯) [Preface-Number 1-The central meaning of the Śrīmālā-sūtra and the (honorific) interpretation of its title] (modern translation)

‘Originally, the person known as [Queen] Śrīmālā, who appears as the sūtra’s protagonist, is miraculously inconceivable....’

iv. Summary:

The Shōtoku Taishi Research Association comprised a group of nine men (two were deceased by the time the association published its translation) in their 60s and 70s who met regularly for some twenty years to study Shōtoku’s texts. After performing an exhaustive study of the Shōmangyō-gisho in which they read the text together multiple times, they produced a modern Japanese translation that is the most accessible of all these editions. Its ease of use is evident in the translation of the first sentence above, which presents Shōtoku’s text in modern Japanese and inserts helpful terms, adding ‘sūtra’, ‘protagonist’, ‘appears’ and ‘miraculously’. This two-volume edition, which includes a lengthy introduction, divides the Shōmangyō-gisho into short sections, with each section having three parts: a modern Japanese translation accompanied by endnotes; a kundoku version of the Shōmangyō-gisho with furigana and additional endnotes; and a research section that includes short explanations of key points not covered in the
notes. Unlike all the other editions, this translation omits the declaration of authorship but acknowledges the controversy over the text’s authorship. Even so, the translators assert: ‘The more we have studied [the Shōmangyō-gisho], the more we have developed faith that Shōtoku authored it. While it may cause discomfort for those holding the contrary position, we ask that they kindly substitute “the author of the Sangyō-gisho” in the spots in our research where it says “Prince Shōtoku”’. They also acknowledge the claim made by such contrarians that the Dunhuang manuscripts were the source of the Shōmangyō-gisho. In response, they assert that those texts offer a ‘superficial’ reading of the Śrīmālā-sūtra, while Shōtoku’s text penetrates to its very essence.

Example VI. Hayashima Kyōshō 早島鏡正 (1999)

i. Title page:

早島鏡正 – Hayashima Kyōshō
勝鬘経-勝鬘経義疏 – Śrīmālā-sūtra-Shōmangyō-gisho
世界聖典刊行協会 – Association for the Publication of the World’s Scriptures

ii. Declaration of authorship:

この注釈書は大和国の上宮王聖徳太子がみずから撰述
したものです。海のかなたの書物ではない。

‘This commentary was written by King Jōgū-Prince Shōtoku of the Land of Yamato himself; it is not a book from across the sea’.

55 Shōtoku Taishi Kenkyūkai, Shōmangyō-gisho no gendaiyaku, 19.
56 Shōtoku Taishi Kenkyūkai, Shōmangyō-gisho no gendaiyaku, 21.
57 Hayashima Kyōshō, Shōmangyō: Shōmangyō-gisho.
iii. First sentence:

総序 – Preface
釈尊と勝鬘夫人 – Śākyamuni and Queen Śrīmālā

そもそも勝鬘夫人（『勝鬘経』の主人公）の、本来の姿は、われわれの想像を超えた存在者である。

‘From the start, Queen Śrīmālā (the protagonist of the Śrīmālā-sūtra) was one whose original form surpasses our imagination’.

iv. Summary:

Describing his work as a modern translation, Hayashima offers a lengthy introduction to the text that includes an examination of the Śrīmālā-sūtra in the history of Mahāyāna Buddhist texts, chapter-by-chapter summaries, and Shōtoku’s method of dividing the sūtra. Hayashima’s edition offers a translation of a small section of the Shōmangyō-gisho with furigana, footnotes, and explanatory notes inserted into his translation, as seen above, with the following interpolation: ‘(the protagonist of the Śrīmālā-sūtra)’. At the end of each section of the Shōmangyō-gisho, he inserts a separate section surrounded by a border that contains the relevant passage from the Śrīmālā-sūtra. In footnote one at the end of the declaration of authorship, he repeats the information that appears in his joint translation with Hiroshi Tsukishima in the Nihon Shisō Taikai edition described above. In the afterword, Hayashima mentions being introduced to Shōtoku’s teachings in 1942 in a seminar at Tokyo University with Hanayama Shinshō, and describes the significant changes that occurred in Shōtoku Studies since the end of World War II, mentioning that although some questioned Shōtoku’s authorship of the Shōmangyō-gisho, there was, at the time, no consensus.
Reflections on the Scholarly Field

Although the *Shōmangyō-gisho* and the Dunhuang manuscripts have come down to us in the present day, their histories of preservation and reception are distinct, thereby offering us a fascinating case study of authorship, textuality, and canon formation. That is, someone in China clearly valued those manuscripts since they attempted to preserve them for posterity. Even so, Japanese *Shōmangyō-gisho* scholarship offers no evidence that they became foundational to the development of Chinese Buddhist traditions more broadly, unlike the *Shōmangyō-gisho*, which played just such a role in the development of Japanese Buddhism. Its valued status is evident in, for example, the effort scholars made to study, translate, and preserve it and the two other Sangyō-gisho texts, beginning with the treatises of Chikō, Saichō, and others. That value is also evident in the modern scholarship examined above, which has, in pursuing the ‘true record’, been forced to respond to Fujieda’s Dunhuang evidence.

As we have seen, the editors of the six editions mentioned different goals for producing them: for instance, Hanayama points to important changes in the Japanese language since he produced a translation immediately after the war. Publication of the Shitennōji *ehon* marked the 1,350th anniversary of Shōtoku’s death, while the Shōtoku Taishi Research Association intended its two-volume work to honor the memory of their teacher, Kurokami Masaichirō (1900–1930). Despite these differences, each edition seeks to help readers recover and understand Shōtoku’s thought and, in so doing, show why the *Shōmangyō-gisho* has rightly been considered a classic, canonical text worthy of ongoing study and reflection.

The editors of these six editions also responded, in their own ways, to the uncomfortable questions about authorship and originality raised by Fujieda, Koizumi, and others because of the discovery of the Dunhuang manuscripts. Some scholars highlighted minor differences as the basis for maintaining the text’s valued, canonical status. As noted above, Hanayama Shinshō, for instance, identifies some one-hundred eighty distinct passages as evidence for the text’s distinctiveness and has, with other scholars, pointed to characteristically ‘Japanese’ word choice, suggesting the *Shōmangyō-gisho* could
not have been written, as Fujieda and other critics asserted, in China. The Prince Shōtoku Association acknowledges this evidence but maintains its belief that Shōtoku authored the text, inviting skeptical readers to simply substitute ‘author of the *Shōmangyō-gishō*’ for their references to Shōtoku as author when reading their two-volume translation. Others have obliquely acknowledged the Dunhuang evidence. For instance, the afterword to the Shitennōji *ebon* mentions the Dunhuang discoveries and notes that the editors consulted with Fujieda Akira in compiling the *ebon*, but it does not make any sort of statement about the significance of the Dunhuang evidence relative to the *Shōmangyō-gishō*.

These responses to Fujieda’s findings are instructive because they reveal contours of the scholarly field that has focused on recovering the ‘true record’ of Shōtoku as an author and the *Shōmangyō-gishō* as a text. In this approach, scholarship serves mainly an instrumental purpose for recovering facts about the past, whether those facts pertain to the question of authorship or to the qualities seen by many to abide in the text itself and to be the basis of its perceived value: originality, profundity, independent thought, Japaneseesness, and so on. While the Dunhuang evidence put proponents of the true-composition hypothesis on the defensive, critics seem to have taken disproving Shōtoku’s authorship as the ultimate end of their scholarship.58

---

58 In Shōtoku studies more broadly, Ōyama Seiichi produced a number of provocative studies claiming that Prince Shōtoku was a fictitious figure created during the compilation of the *Nihon Shoki*, distinguishing Shōtoku Taishi from Umayato no miko (see, for example, *Shōtoku Taishi no shinjitsu*). Ōyama asserts that unlike the former, the latter is an actual historical figure about whom we can recover just a small number of details. In ‘The Thesis That Prince Shōtoku Did Not Exist’, Kazuhiko Yoshida, citing Ōyama’s work, writes about the early records like the *Nihon Shoki* that describe Shōtoku and asks: ‘What is one to make of these various episodes? Do they convey historical facts or are they mere fiction? More than one hundred years have elapsed since the birth of modern historiography in Japan, and during this time historians, basing themselves on the spirit of rationality and on positivism, have overturned past historical perceptions and rewritten history through the determination of facts. On the subject of Prince
Although this persistent focus on the question of authorship represents one form of valid historical inquiry, it seems to have foreclosed other productive and, for me, more interesting avenues, or ‘roads’, of scholarly study related to this long history of transmission and reception, whereby the text attributed to Prince Shōtoku has diverged from these manuscripts from ‘across the sea’. Indeed, if we view this question of authorship and the search for the ‘true record’ as simply one small part of Shōmangyō-gishi studies and adopt different assumptions about text and author, then other sorts of fascinating avenues of inquiry open up in relation to the Dunhuang discovery. By way of conclusion, I outline just a few of those avenues.

Conclusion

To separate this debate over authorship from the subsequent 1,500-year history of the Shōmangyō-gishi’s reception and use in Shōtoku’s name, we can draw on the scholarship of Alexander Nehamas who makes the useful distinction between the writer/text and the author/work. In the former pair, the writer represents a historical person who acts as the ‘efficient cause of the text’s production’, and exists outside the text which he or she precedes ‘in truth and appearance’. A writer does not have ‘interpretive authority’ over a text, even if it is her legal property. If a text were taken from a writer, she would not change as an individual. Nehamas writes: ‘Precisely for this reason, Shōtoku too historians have been unsparing in their evidential research and have been steadily clarifying the relevant facts’ (3). He also observes: ‘In school education too one finds, for instance, that in a history textbook used in many high schools, Prince Shōtoku has come to be referred to as “Prince Umayato (Prince Shōtoku)” and there is no longer any mention of his having been crown prince or regent, nor is there any reference to the commentaries on three Buddhist sūtras traditionally attributed to him. It would appear that the authors of this textbook have decided that these aspects of his career cannot be regarded as historical facts’ (1).

writers are not in a position of interpretive authority over their writings, even if these are, by law, their property. We must keep the legal version of ownership...clearly apart from what we might well call its “hermeneutical” aspect. The text is, then, the written material produced by a writer and put out into the world. In Shōmangyō-gisho studies, scholars concerned themselves almost exclusively with the writer and the text, framing their search for the ‘true record’ like lawyers presenting their arguments in a courtroom drama.

By contrast, Nehamas treats an author mainly as a product rather than a producer of a text—that is, a figure who evolves as a text like the Shōmangyō-gisho undergoes study, interpretation, and reproduction. The author then is a role or figure emerging with, not preceding, textual interpretation. In the case of the Shōmangyō-gisho, then, scholars and critics have continually remade Shōtoku the author as they transmitted and transformed the text over the centuries, regardless of whether a historical figure known as Prince Shōtoku actually sat and composed it. Therefore, the work would include the Shōmangyō-gisho as others have studied, edited, and copied it since its appearance under Shōtoku’s name, including its presentations in the editions examined above.

If we adopt this distinction, we are no longer beholden to the legalistic, true-false binary that defined the search for the ‘true record’, and have instead a workable set of concepts with which to investigate aspects of the distinct reception histories of the Shōmangyō-gisho and the Dunhuang manuscripts, which are, in Nehamas’s language, similar texts but quite different works.

The following observation of Charles Hallisey is also helpful:

If the survival of any particular text is not self-explanatory, but in fact it is normally the case that texts fade in their significance as social change occurs, then we need to discover how those texts which do endure are maintained. In part, this will require us to look at the manner in which texts were circulated—the technology, practices, and institutions which made their survival possible—but espe-

---

cially the processes by which certain texts were singled out as worth preserving. Discovering answers to such questions will require investigations about the extent to which the production and survival of a text is both dependent and independent of the audiences which receive it.\footnote{Hallisey, ‘Roads Taken’, 51.}

By reversing our temporal perspective in this way, we can compare how different interpretive communities engaged and remade the Shōmangyō-gisho as a work. Brian Stock calls these sorts of groups who orient themselves around a particular text a ‘textual community’, which he defines as ‘a group that arises in the space between the written text and the formation of a particular form of social group: It is an interpretive community, but it is also a social entity’.\footnote{Stock, \textit{Listening for the Text}, 150.} For example, I have written elsewhere about the quite different sorts of textual communities that developed in the Kamakura period at Tōdaiji around the figure of the polymath Gyōnen and in the modern period around the Shōtoku Taishi Association who produced the modern Japanese, two-volume edition of the Shōmangyō-gisho examined above.\footnote{See Dennis, ‘Serious Texts in Funny Places’, 2011.} A representative of the powerful Kegon school in the Kamakura era, Gyōnen defined his monastic identity in relation to the ability to interpret the Sangyō-gisho commentaries. The textual community that developed around him, and which transmitted his exegetical works, is distinct from the association’s modern textual community that developed, notes Ishii Kōsei 石井公成, out of a modern nationalist organization whose extremist forebears had organized attacks on Tsuda Sōkichi during the war for his contrarian views.\footnote{In ‘Why Do Debates About Shōtoku Taishi Get So Heated?’, Ishii Kōsei notes that students at ‘Tokyo University formed the Tōdai Seishin Kagaku Kenkyūkai 東大精神科学研究会 (Tokyo University Research Association for the Promotion of the Japanese Spirit) and they would call on various other universities and eventually formed the Nihon Gakusei Kyōkai 日本学生協会 (Japan Student}
However, we can compare these two communities in other ways. For instance, Gyōnen’s detailed *kanbun* subcommentaries on the *Sangyō-gisho* became foundational to the exegetical tradition of the three texts and students still study them today, notes Mark Blum, as primers at Japanese universities. From the perspective of the work, Gyōnen’s commentary on the *Shōmangyō-gisho* is also relevant because he remarks that he added markings to Shōtoku’s texts to help his disciples better understand their meaning. Those markings added to the Chinese text represent the early stages of a process that developed over the centuries, culminating in the paratextual markings we examined above, including those appearing in the association’s modern translation. In this way, we can see how a text written in the transregional Chinese language has become available as a work, through the association’s two-volume translation, to the public in highly accessible modern Japanese with extensive *furigana*, notes, and other sorts of paratextual material that made it possible today for someone proficient in college-level Japanese to make sense of the *Shōmangyō-gisho* with no facility in its original language.

As Fujieda suggests, these sorts of changes to the presentation of the *Shōmangyō-gisho* can reorient the reader in important ways and are

National Students Association). When Tsuda Sōkichi lectured at Tokyo University and was grilled by a mob of students it was mostly students from this organization. After the war the Tōdai Seishin Kagaku Kenkyūkai became the Kokumin Bunka Kenkyūkai 国民文化研究会 (National Culture Research Association). This organization continues to this day, and although they have calmed down considerably since the wartime they still conduct conservative “enlightenment campaigns” directed at students, publish the works and poetry of Kurokami, and even put together a research group that published a commentary on the *Shōmangyō-gisho*. See Ishii, Public Lecture. The commentary referred to by Ishii is one of the six texts examined above.

Gyōnen recorded this activity in the colophon of a copy of the Hōji print of the *Yuimagyō-gisho*, writing: ‘I have added markings to the text and given it to [my disciple] Zenmyō. This [version] can be used to aid in the transmission of [Shōtoku] Taishi’s three commentaries’. He signs it as ‘Gyōnen, Scholar of the Three Commentaries of Shōtoku Taishi’. Quoted in Hanayama, Jōgūōsen, 102.
thus worthy of scholarly attention, especially as we try to understand how these varied ‘technolog[ies], practices, and institutions’ influenced the process of textual divergence. We can also view these changes to the *Shōmangyō-gisho* as a *work* in light of broader linguistic and cultural changes that have taken place over the centuries since Gyōnen inserted paratextual markings to aid his students—indeed, Hanayama states that the revised edition he produced in 1977 was occasioned by such changes in the relatively short span of just over thirty years.

Future research that will build upon this material will consider these changes in light of the scholarship of David Lurie and others on the development of writing and reading practices on the archipelago. Lurie argues that reliance on the Chinese-Japanese binary discussed above is often misleading because it masks multiple, often complex, reading and writing practices and registers. In describing the development and uses of *kundoku*, which are crucial to understanding the broader Japanese Buddhist textual traditions of which the *Sangyō-gisho* are a part, he states that rather ‘than phonographic transcription, it was this method of reading/writing that dominated all modes of literacy in early Japan, from at least the mid-seventh century on. This means that we cannot describe texts arranged in accordance with Chinese vocabulary and syntax as being written “in Chinese” (no matter what their origins), a conclusion that has profound implications for Japanese cultural history, which has been framed by a linguistic opposition between Chinese and Japanese’.

So too, naturally, for the study of Buddhist texts like the *Shōmangyō-gisho* and the two other *Sangyō-gisho* commentaries.

Lurie argues, moreover, that scribes from the Korean peninsula likely brought the *kundoku* practices to the archipelago and that because they were so widespread, it is impossible to distinguish between Chinese and Japanese writing in early Japan because regardless ‘of how thoroughly a text might conform to literary Chinese style and usage, it could potentially be read in Japanese (or Korean) rather than Chinese’. Lurie also mentions errors committed by Japanese

---

authors when writing in a Chinese style that were ‘traditionally stigmatized as washi, “Japanese practice” 和(倭)習, sometimes more pejoratively written as the “reek of Japanese” 和臭’. 68 Hanayama Shinshō, Kanaji Isamu, and others identified these sorts of errors in the Sangyō-gishō as proof of Japanese authorship and they have been studied extensively by Ishii Kōsei in more recent scholarship. 69

68 Lurie, Realms of Literacy, 181.

69 The debate generated by the Dunhuang evidence has spurred on additional inquiries into the language of the text itself. In his exhaustive studies of the Shōmangyō-gishō and Hokke-gishō, produced before Fujieda’s discovery, Hanayama Shinshō identified passages in the two texts he describes as being clearly influenced by the Japanese language, suggesting that a native speaker of Chinese could not have written them. This assertion, repeated by others, was used to argue against the claim that the Shōmangyō-gishō was written in China, brought to Japan, and falsely attributed to Shōtoku, as Fujieda and others claimed. Although Ishii Kōsei 石井公成 recognizes Fujieda’s research as ‘epoch-making’, he too argues against Fujieda’s conclusion about the text’s provenance. Ishii used N-gram searches of the SAT, CBETA, EBTC, and other textual databases to show clear commonalities in word choice across the three Sangyō-gishō texts, suggesting that the same author or group composed them. For instance, after listing the first several lines of the Shōmangyō-gishō, Ishii writes the following about one of the passages examined above: ‘among these [passages], “[As for Queen Śrīmālā,] she was originally inconceivable”, appears in the Shōmangyō-gishō twice, the Hokke-gishō once, and the Yutimagyō-gishō twice; it does not appear in any other literature. The following [passage], “[No one knows] whether she is a transformation body of the Tathāgata, or [the Great Dharma Cloud]”, appears only in the [Shōmangyō-gishō and] once in the Hokke-gishō. If we consider just this [information], it becomes clear that the Sangyō-gishō was written by the same author or by those from the same academic lineage’. See Ishii, ‘Sangyō-gishō no kyōtsū hyōgen’, 390. Ishii also identifies a significant number of phrases found only in the Sangyō-gishō, or in the Sangyō-gishō and a small number of others texts. In support of Hanayama’s assertion about Japanese-inspired turns of phrase, Ishii identifies a number of passages that seem to be influenced by the Japanese language, and criticizes Fujieda, writing: ‘The research of Fujieda and the other members of the Dunhuang Research Group was groundbreaking for
Lurie describes the role ascribed by historians to Shōtoku as providing a native origin to the imported Buddhist religion and that ‘Shōtoku guaranteed the domestication and naturalization of imported ideas and practices, among them various sacred (and secular) uses of writing’. The attribution of the *Shōmangyō-gisho* to Shōtoku that we examined in the declaration of authorship and the work’s subsequent divergence from the Dunhuang manuscripts can be viewed in this light. As I suggested above, the *Shōmangyō-gisho* played a key role in the early process of assimilating the translocal Buddhist traditions in the local conditions of the archipelago, offering interesting points of comparison and divergence from that process in other parts of East Asia. That process on the archipelago includes, as Michael Como’s scholarship reveals, the often underappreciated, and even elided, roles played in this process by immigrants from the Korean kingdoms and Chinese dynasties. From this perspective, we can consider how the translations and critical editions noted above, as well as the many other sorts of textual engagements and transformations have, over many centuries, transmitted and embedded the *Shōmangyō-gisho* in a particularly local context distinct from that of the Dunhuang manuscripts, while working through a shifting sense of the debt owed to the cultures and Buddhist traditions from across the sea and to the west.

both research on the history of commentaries of Chinese translations of the *sūtras* and on the *Sangyō-gisho*; even so, possibly because the discovery of the Dunhuang manuscripts was so shocking, we maybe can surmise that they did not pay attention whatsoever to the Japanese-influenced language and special characteristics found in the *Sangyō-gisho*, beginning with the [work here in this article on] the *Shōmangyō-gisho*. See Ishii, ‘*Sangyō-gisho* no gohō’, 524. Jamie Hubbard translated into English some of Ishii Kōsei’s scholarship that can be found at: https://komazawa-u.academia.edu/ISHIIKosei. Ishii also maintains an online blog, titled, ‘*Shōtoku Taishi* Kenkyū no Saizensen’ 聖徳太子研究の最前線 at: https://blog.goo.ne.jp/kosei-gooblog.
